Prescription requirements for Controlled Drugs:

Pharmacists are not allowed to dispense a CD unless all the information required by law is given. For further guidance refer to the BNF; Guidance on Prescribing – Controlled Drugs and Drug dependence (can be found at the front section of the BNF).

Electronic prescribing of Controlled Drugs

All prescriptions should be sent via EPS where practical to do so. If a paper FP10 is received the validity of the FP10 should be checked by seeking consent to access the patient's

summary care record and checking that it is valid. Where this cannot occur, and when it is handwritten the prescriber should be contacted to check validity.

This may not always be possible, and discretion is appropriate to avoid delaying access to medication.
